Define the Problem Statements

Date	19 September 2022
Team ID	PNT2022TMID02315
Project Name	Inventory Management System for Retailers
Maximum Marks	2 Marks

Problem Statement:

Retailers do not have any automated system to record orders and keep track of their inventory data. It is difficult for the retailers to constantly monitor stocks of all items and place orders accordingly every time they are running low because they only keep records in logbooks that are not properly organized.
